

Lake Forrest Drive Dam (Project Manager – Dane Hanson)

- Sandy Springs staff conducting ongoing observation of dam after rainfall events of 0.5” or more.
 - 2016 - 16 observations conducted to date
- Fish relocation completed July 30, 2015; second day was August 6, 2015. Based on recommendations from the ecologist, remaining fish will not be relocated at this time.
- Lake has been lowered approximately 12’ below the original elevation
 - Riser pipe cut and modified to maintain the lower water elevation
 - Contractor has completed the last phase of the lake draining. Currently coordinating installation of the fence and addressing downstream sediment issues.
- Schnabel Engineering revised their proposal to only include the subsurface soil investigations and an analysis of the options to address the issues with the dam. The proposal was reviewed and comments were sent to Schnabel.
- **Total Available Budget (T-9000) - \$1,910,000.00**
